

TELINGA Microphones,

Parabolic microphones & other equipment for Wildlife Sound Recording.

The PRO5 mono "Twin Science":

[Smaller than actual size.]

To optimize the high frequency response of the Cardioid, the microphone can be moved out 20 - 30 mm.

Useful hint:

Place a small transistor radio, outdoors, at a distance of about 30 meters. Use it's noise between stations to explore the effect of moving the microphones in and out of focus.
